- A wounded animal is a harvested animal
- No open fires
- Keep gates closed
- No camping
- No drugs
- No alcohol

Missouri Flat CWMU Description

Missouri Flat CWMU is divided into two parts, the west part and the east part. The west part is located southwest of Kanosh, Utah, and the east part is more directly south of Kanosh. On the north and west part of the west Unit the boundaries are hard surface roads. The highest elevations on the west part are in the extreme south, **6600 feet**. This elevation drops into Dog Valley around 5700 feet. Then the elevation rises again to 6400 feet before dropping down into White Sage Flat, **5000 feet**. Another rise in elevation to Six Mile Point (5400 feet) and higher to 5900 feet before dropping down to about 5000 feet just outside of the town of Kanosh. The east part of the Unit is much smaller. The east part is northwest and northeast of Gardner Hollow Reservoir (8300 feet). On the east part the highest elevations are at **9000 feet** on the east unit border. These elevation decrease to 8800 feet at Pole Hill and are about 7900 feet on the westside of this part. Skinner Hollow, 8100 feet to 8600 feet; Lewis Hollow. 8500 to 8600 feet; Pole Creek, 7900 feet to 9100 feet; and Skunk Creek, **7300 feet** to 7600 feet are major drainages that cut the east part.

The Missouri Flat Cooperative Wildlife Management Unit (CWMU) has three parts, but the southeast parts are small in comparison and close together. The larger part of the CWMU is dominated by Colorado Plateau **Pinyon-Juniper Woodland** (36), and though the smaller parts have Pinyon-Juniper, the dominate land cover on these subunits is Inter-Mountain Basins Montane **Sagebrush Steppe** (62). There are localized areas of Inter-Mountain Basins **Big Sagebrush Shrubland** (48) on the large area, and localized area of Rocky Mountain **Gambel Oak-Mixed Montane Shrubland** (41) on the smaller areas.
